Aluminum Pallet – Work Station

An aluminum posted pallet is used as a workstation to allow LIFT-O-FLEX® ergonomic lifter leg access for loading or unloading wood pallets. Simply place your wood pallet on top of the aluminum pallet. The pallet can now be moved with either a fork truck or pallet jack.

As loads are loaded or unloaded, the lifter now can access the product. The aluminum pallet provides a safe and clean environmental alternative to plastic or wood pallets and is washable and recyclable. RonI stocks several standard sizes. Custom sizes are available to fit your application. For additional information, contact either RonI, Inc. or an authorized dealer or representative.
